4) What is the pH of the following?
a. 0.0010 M HCl solution? 3.0
b. 0.15 M KOH solution? 13.2
c. $10^{-8} \mathrm{M} \mathrm{HNO}_{3}$ solution? 6.96 *Hint-this is SUPER tricky...when very low $[\mathrm{H}+]$ you can't ignore the $[\mathrm{H}+]$ coming from the auto ionization of water! Remember... $\mathrm{H}_{2} \mathrm{O} \leftrightarrow \mathrm{H}_{+}+\mathrm{OH}_{-}$, you should remember the []'s of each substance from the auto ionization of water...
5) Complete the table for each aqueous solution at $25^{\circ} \mathrm{C}$. State whether the solutions are acidic or basic. You do not need to show your work for all of these, but you can always use binder paper if needed!
