1) Below is the PES of sulfur, and a table of successive ionization energies. The energy scale for the PES is in $M J / m o l$ ( $1 \mathrm{MJ}=1000 \mathrm{~kJ}$ ). There is exactly one peak on this graph whose energy corresponds to an ionization energy in table 7.2. What is it? Why doesn't anything else match up?

| 1000 |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 10 Ener |  | 1 |  | 0.1 |
| TABLE 7.2 - Successive Values of lonization Energies, 1 , for the Elements Sodium through Argon (kJ/mol) |  |  |  |  |  |  |  |
| Element | $I_{1}$ | $I_{2}$ | $I_{3}$ | $I_{4}$ | $I_{5}$ | $I_{6}$ | $I_{7}$ |
| Na | 496 | 4562 |  |  | shell elec |  |  |
| Mg | 738 | 1451 | 7733 |  |  |  |  |
| Al | 578 | 1817 | 2745 | 11,577 |  |  |  |
| Si | 786 | 1577 | 3232 | 4356 | 16,091 |  |  |
| P | 1012 | 1907 | 2914 | 4964 | 6274 | 21,267 |  |
| S | 1000 | 2252 | 3357 | 4556 | 7004 | 8496 | 27,107 |
| Cl | 1251 | 2298 | 3822 | 5159 | 6542 | 9362 | 11,018 |
| Ar | 1521 | 2666 | 3931 | 5771 | 7238 | 8781 | 11,995 |

2) Here is a picture of the original Bohr model of lithium ( $Z=3$ ), and next to it, the PES of lithium. Is there anything in the PES data for this element that requires revision of the Bohr model? Explain.

3) Similarly, here is the original Bohr model of carbon and the corresponding PES. Is there anything in the PES data for this element that requires revision of the Bohr model? Explain.

4) Here is a PES spectrum of boron $(Z=5)$ superimposed on that of fluorine $(Z=9)$

5) Below is shown the PES spectrum of sulfur (atomic number = 16)

a. Write the full electron configuration of sulfur
b. Label each peak in the spectrum to show which subshell it represents (i.e., 1s, 2s, etc.) On diagram above
c. On the spectrum, sketch in the relative locations and correct peak heights for the spectrum of aluminum (atomic number =13). By relative location, I mean correctly to the left or right of the same subshell peak in the sulfur spectrum. On diagram above
d. Draw a circle around the sulfur peak whose energy is equal to the first ionization energy of sulfur. On diagram above
