## Directions:

1. For each of the following molecules, determine the number of lone pairs and bonded pairs around the central atom. What is the steric number based on this?
2. Describe the structure according to the number of regions of electron density. In other words - what is the Electron Geometry?
3. Rename the shape you see based on the bonded atoms. In other words - what is the Molecular Geometry?
4. Estimate the angle between the atoms attached to the central atom.
